

Samuel Vila

Senior Java Developer · Backend Engineer

@ svila.smr@gmail.com in linkedin.com/in/samuel-vr gh github.com/SamuelAdigos

◎ Galicia, Spain

PROFILE

Backend developer with **8+ years** building applications with **Java**, currently at **Inditex** in the **Platform Core Supply Chain (PCSC)** vertical. Passionate about clean code, well-modelled domains and pragmatic architecture: Hexagonal, DDD, CQRS, event-driven design and TDD, applying whichever design pattern each problem calls for. **Advanced, deliberate use of AI as a development copilot** to be as productive as possible, always keeping engineering judgement and code review in human hands. Studying a **Specialization Course in AI & Big Data** since October 2026 and contributing to **open source** since 2026.

KEY SKILLS

Languages & frameworks	Java 25 (and 8–21), Spring Framework 7, Spring Boot, Spring Cloud, Spring WebFlux, Spring Security, Hibernate, MapStruct, Lombok
Messaging & APIs	Kafka, Apache Avro, Schema Registry, REST / OpenAPI (API-first), GraphQL, SOAP, Amazon SQS / SNS, Temporal.io
Data	MongoDB, PostgreSQL, Oracle, Informix · SQL tuning
Cloud & DevOps	Docker, Kubernetes, Helm, AWS, Azure, Google Cloud, Jenkins, GitHub Actions, Sonar, Maven, Gradle
Observability & testing	OpenTelemetry, Micrometer, Prometheus, Grafana · JUnit 5, Mockito, Karate, Cucumber, Gatling, Instancio, BlockHound
Architecture & patterns	Hexagonal, DDD, CQRS, event-driven, microservices · Outbox, Saga, ACL, idempotent consumer · GoF patterns · TDD, SOLID, Clean Code
AI-augmented development	Claude Code CLI, OpenCode CLI, Orca (AI workspaces & sessions) · model selection per task to balance quality and credit cost · human review of every change

PROFESSIONAL EXPERIENCE

May 2024 – Present

Inditex — Senior Java Developer

*High-performance staff team that kicks off projects from scratch, reinforces teams with high workload and sets the technical foundations for the rest. For the past year in the **Platform Core Supply Chain (PCSC)** vertical, helping across several projects.*

- Design and development of **event-driven microservices** with Hexagonal architecture, DDD, CQRS, TDD and SOLID, applying the design patterns each problem needs (Transactional Outbox, Saga, Anti-Corruption Layer, Strategy, Factory...).
- REST APIs with **OpenAPI** (API-first) and **Kafka** event APIs with **Avro** & Schema Registry; Anti-Corruption Layers and Bounded Contexts.
- Took part in the platform upgrade from **Java 21 to Java 25** and **Spring Framework 7**.
- Observability by design with Micrometer, OpenTelemetry and Prometheus. End-to-end ownership of tasks in a self-sufficient team.
- **Weekly on-call support shifts** for the project, handling production incidents.
- **Advanced use of AI as a development copilot** (Claude Code / OpenCode CLI, Orca) to design, code, organise work and automate day-to-day processes, maximising productivity — every change goes through my own review, tests and quality gates before each commit / PR.

`Java 25 · Spring Framework 7 · Kafka · Avro · Schema Registry · OpenAPI · Karate · JUnit 5 · Mockito · Instancio · OpenTelemetry · Prometheus · MongoDB · PostgreSQL · Docker`

Oct 2023 – May 2024

Diverger — Senior Java Developer

Company's own product: a single platform to manage resources across AWS, Azure and Google Cloud.

- Development of software solutions using **generative AI** and engineering best practices.
- Microservices with Hexagonal architecture and DDD, keeping each cloud-provider integration decoupled and extensible through design patterns.
- GraphQL APIs and behaviour-driven tests with Cucumber.
- CI/CD tasks: Docker images, Helm charts, Jenkins pipelines and Sonar quality gates, deploying on Kubernetes.

`Java 17 · Spring Boot 3 · Spring Cloud · AWS · Azure · GCP · GraphQL · Kubernetes · Helm · MongoDB · Cucumber · Gradle`

Aug 2021 – Oct 2023

Hewlett Packard Enterprise — Senior Backend Developer

Reactive, asynchronous microservices on Kubernetes with a strong focus on testing and observability.

- Non-blocking services with Spring WebFlux and Hexagonal architecture; BlockHound to detect blocking calls.
- Workflow orchestration with Temporal.io and asynchronous messaging over Amazon SQS / SNS.
- TDD across the whole test pyramid: unit, integration, e2e (Cucumber) and load tests (Gatling).
- Distributed tracing and telemetry with OpenTelemetry, Micrometer/Sleuth, Grafana and Logstash.

`Java 17 · Spring WebFlux · Spring Boot 3 · Temporal.io · Amazon SQS/SNS · OpenTelemetry · Gatling · MongoDB · Kubernetes · Helm`

Jun 2020 – Aug 2021

Nática — Senior Backend Developer

Two products and two stacks in parallel: Java (Spring) and VB.NET (ASP.NET Web Forms).

- Took part in the migration of a Java application to microservices while maintaining legacy code.
- Close work with the functional team: technical analysis of requirements, development and testing.

`Java 11 · Spring Boot · Spring Security · Oracle · MongoDB · Jenkins · ASP.NET Web Forms · SOAP`

Sep 2019 – Jun 2020

Atos — Mid Backend Developer

High-demand platform for the Galician public healthcare sector.

- Wide functional scope: invoicing, delivery notes, purchase orders and warehouse accounting.
- SOAP integrations (Spring WS) with legacy external public services and internal services; technical analysis of new features.

`Java 11 · Spring Boot 2 · Spring WS · Hibernate · SOAP · Oracle · Informix · Maven`

Apr 2019 – Sep 2019

Coremain — Junior Backend Developer

Projects for Galician public education.

- School admissions system and extraordinary awards platform.
- SQL performance work: query tuning, stored procedures and JasperReports.

`Java 8 · Spring · Struts 2 · Oracle · JasperReports · SOAP · Tomcat`

Sep 2018 – Apr 2019

Altia — Junior Backend Developer

Projects for the Galician public administration.

- Grew from guided tasks to autonomous work; bug fixing, code-smell clean-up and documentation.

`Java 8 · Spring · JSF · JSP · Struts · Informix`

EDUCATION & TRAINING

Oct 2026 – Present — **Specialization Course in Artificial Intelligence & Big Data** · CIFP A Carballeira – Marcos Valcárcel

2016 – 2018 — **Higher VET Diploma in Web Development (CFGS)** · CIFP A Carballeira – Marcos Valcárcel

2012 – 2014 — **Intermediate VET Diploma in Microcomputer Systems and Networks (CFGM)** · IES Antón Losada Diéguez

OPEN SOURCE & PERSONAL PROJECTS

2026 – Present

Open-source contributor
Contributing to open-source projects to give back to the community and learn new methodologies, alongside the personal projects I maintain.

2015 – 2018

Los Santos RP — GTA roleplay community (lead developer)
Led the technical development of two game servers: SA:MP game modes in PAWN (200,000+ lines of code, up to 1,000 concurrent players) and a GT:MP server in C# and JavaScript for a community of 60,000+ registered users.
